

BEYOND THE COURTS:

How Mezzanine Floors Can Transform Padel Club Venues

WSL Warehouse Systems Limited

UKCA

Create more space for socialising, fitness, viewing galleries and other club facilities, without compromising the courts.

More Than Just Padel

Creating a Complete Club Experience

Padel is growing rapidly across Britain, bringing new opportunities for club operators to develop venues that offer much more than court hire.

A successful club can become somewhere people meet, exercise, socialise and relax.

But where do you find the space for additional facilities?

A mezzanine floor can create an additional level within a suitable building, allowing clubs to introduce new facilities while retaining valuable ground-floor space.

The possibilities include:

Elevated viewing galleries
Cafés, lounges and social areas
Gyms and fitness studios
Recovery and wellbeing facilities
Retail and merchandise areas
Offices and staff facilities

A Different View of the Game

Elevated Viewing Galleries

Give spectators a dedicated space to enjoy the action from a different perspective.

A mezzanine viewing gallery can provide an elevated position overlooking the courts, creating a more engaging experience for friends, families and tournament spectators.

Benefits of an elevated viewing area:

Clearer views of the action
Dedicated space for spectators
Opportunities to connect with cafés or lounges
A more engaging club atmosphere
Viewing areas positioned away from court activity

Designed around the courts: Positioning, access, edge protection and court clearance must all be carefully considered.

Space to Socialise

Meet, Eat & Unwind

The game might bring people through the door, but comfortable social spaces can encourage them to stay longer.

A mezzanine provides opportunities to introduce welcoming areas where players and visitors can catch up before or after a match.

Make room for:

Cafés and refreshment counters
Comfortable seating and lounges
Club gatherings and social events
Private functions
Relaxation areas overlooking the courts

Whether overlooking the action or positioned away from the activity below, these spaces can become an important part of the club experience.

Fitness & Wellbeing

More Ways to Stay Active

Why limit the experience to padel?

Introducing additional fitness and wellbeing facilities gives members more opportunities to exercise, recover and relax within the same venue.

Potential mezzanine facilities:

Gym and strength training areas
Fitness and exercise studios
Personal training spaces
Saunas and recovery facilities
Dedicated relaxation areas

Important design considerations

Different activities place different demands on a mezzanine structure. Floor loading, equipment, movement, ventilation, drainage and building services must be considered during the design process.

Making Space Work Harder

Retail & Back-of-House Facilities

Not every part of a padel club needs to occupy valuable ground-floor space.

A mezzanine can accommodate retail and operational facilities, helping to keep the main floor focused on courts and visitor activities.

Retail Opprtunities:

Rackets, balls and accessories
Sportswear and equipment
Club-branded merchandise
Product displays and stock storage

Operational Facilities

Offices and administration areas
Staff facilities
Equipment storage
Separate staff-only spaces

With a carefully planned layout, these facilities can operate alongside the club's main attractions without disrupting visitor movement.

Is Your Builsing Suitable?

Planning a Padel Club Mezzanine

A mezzanine can create valuable additional floor space, but its design must work around the building and the courts.

Key considerations include:

Court clearance: *Preserving the unobstructed overhead space needed for play.*
Building structure: *Assessing the floor slab, foundations and structural conditions.*
Layout and access: *Positioning columns, staircases and circulation routes.*
Loading requirements: *Designing for the intended activities, equipment and occupancy.*
Safety and accessibility: *Considering fire safety, escape routes, edge protection and relevant building requirements.*
Future requirements: *Allowing for realistic plans to introduce additional facilities.*

A detailed site survey is the first step towards establishing what's possible.

Designed Around Your Club

A Mezzanine That Fits Your Venue

A mezzanine floor is a substantial steel structure, but that doesn't mean it needs to look industrial or out of place.

With a bespoke design, the structure can complement your club's appearance while providing the additional space you need.

Design possibilities include:

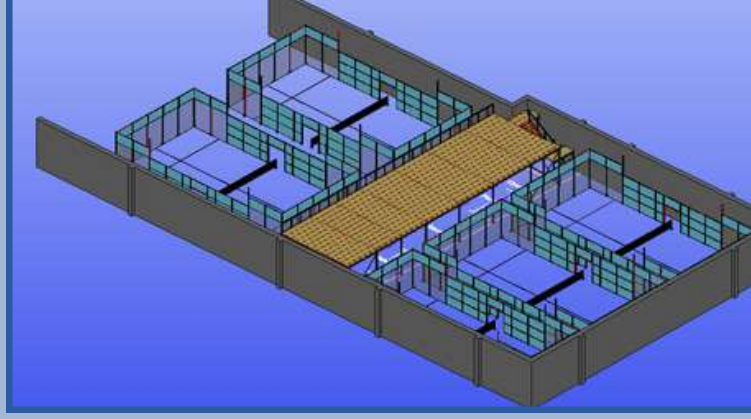

Bespoke layouts and configurations
Colour-matched structural elements
Contemporary finishes
Feature lighting
Integrated staircases and access
Areas designed around specific activities

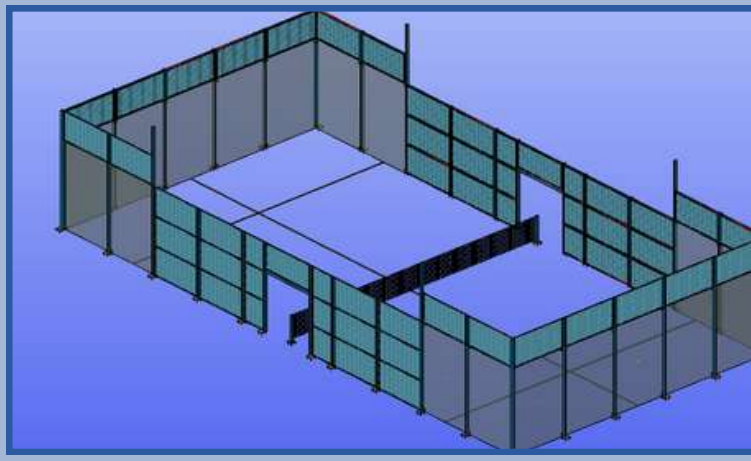

Practical, functional and visually appealing.

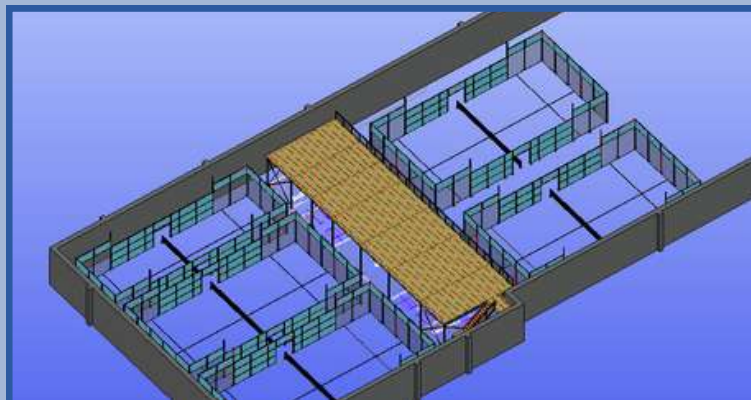

At WSL, we consider how your mezzanine will look, how people will use it and how it connects with the rest of your venue.
